WTC series Configuration Network Tool

1. WTC series WiFi EasyConn distribution tool introduction

The function of the WiFi EasyConn mobile APP is to configure the channel of the table card network. Input the number of table cards through the WiFi EasyConn mobile APP to configure the number of table cards and network configuration. It is one of the devices in the WTC series table card network configuration. After the network configuration is successful, log in to the WTCMS electronic table card intelligent management system software to bind the configured table cards to use the WTCMS electronic table card intelligent management system software. WTCMS electronic table card intelligent management system software is the control and management center of conference table cards. Users can edit the conference information, enter the participant information and the template of the table card display content, and send the template to the conference table card.
